
MetaX - Advanced Features

MetaX has several advanced features to assist in tagging your video files.

Archive

The archive feature automatically saves the tag data that you write to your files. To access this information, click on the "Archive" button in the toolbar.

1. Clicking an item in the archive will apply the archived tags to your currently selected queue items.
2. To remove archive items, select them and right click and select delete. Multiple items can be selected for deletion.
3. Archive items can be manually edited right in the archive window. Just double click and make your changes.
4. Archive data can be exported and imported via the right click menu. Selected archive items will be exported to a MetaX archive file (.mxa) with the export function. These files can be imported with the import function.

Presets

Presets allow you to store tags that you want to use over and over again. This is especially handy for tagging TV shows within a certain season.

1. To make a preset, select the check boxes beside the tags you wish to put into the preset. Open the preset window by clicking the "Presets" button on the toolbar. Click the Add button on the preset window. Give your preset a name when prompted. You now have a preset stored which contains the selected tags.
2. Applying a preset is even easier. Select the queue item(s) that you would like to tag with the preset, and then select the preset from the list that you want to use. Click the OK button on the preset window to put those tags into the appropriate fields. The check boxes are automatically selected for you.
3. To remove a preset, simply select the preset you wish to delete and click the Delete button at the bottom of the preset window.

Frame Grabber

You can select a frame from your video file to act as the cover art. Open the frame grabber window from the toolbar, and advance to the desired frame in the movie. Click the "Grab Image" button. Then use the mouse to select the portion of the frame that you would like to set to the cover art tag.

Movie Posters

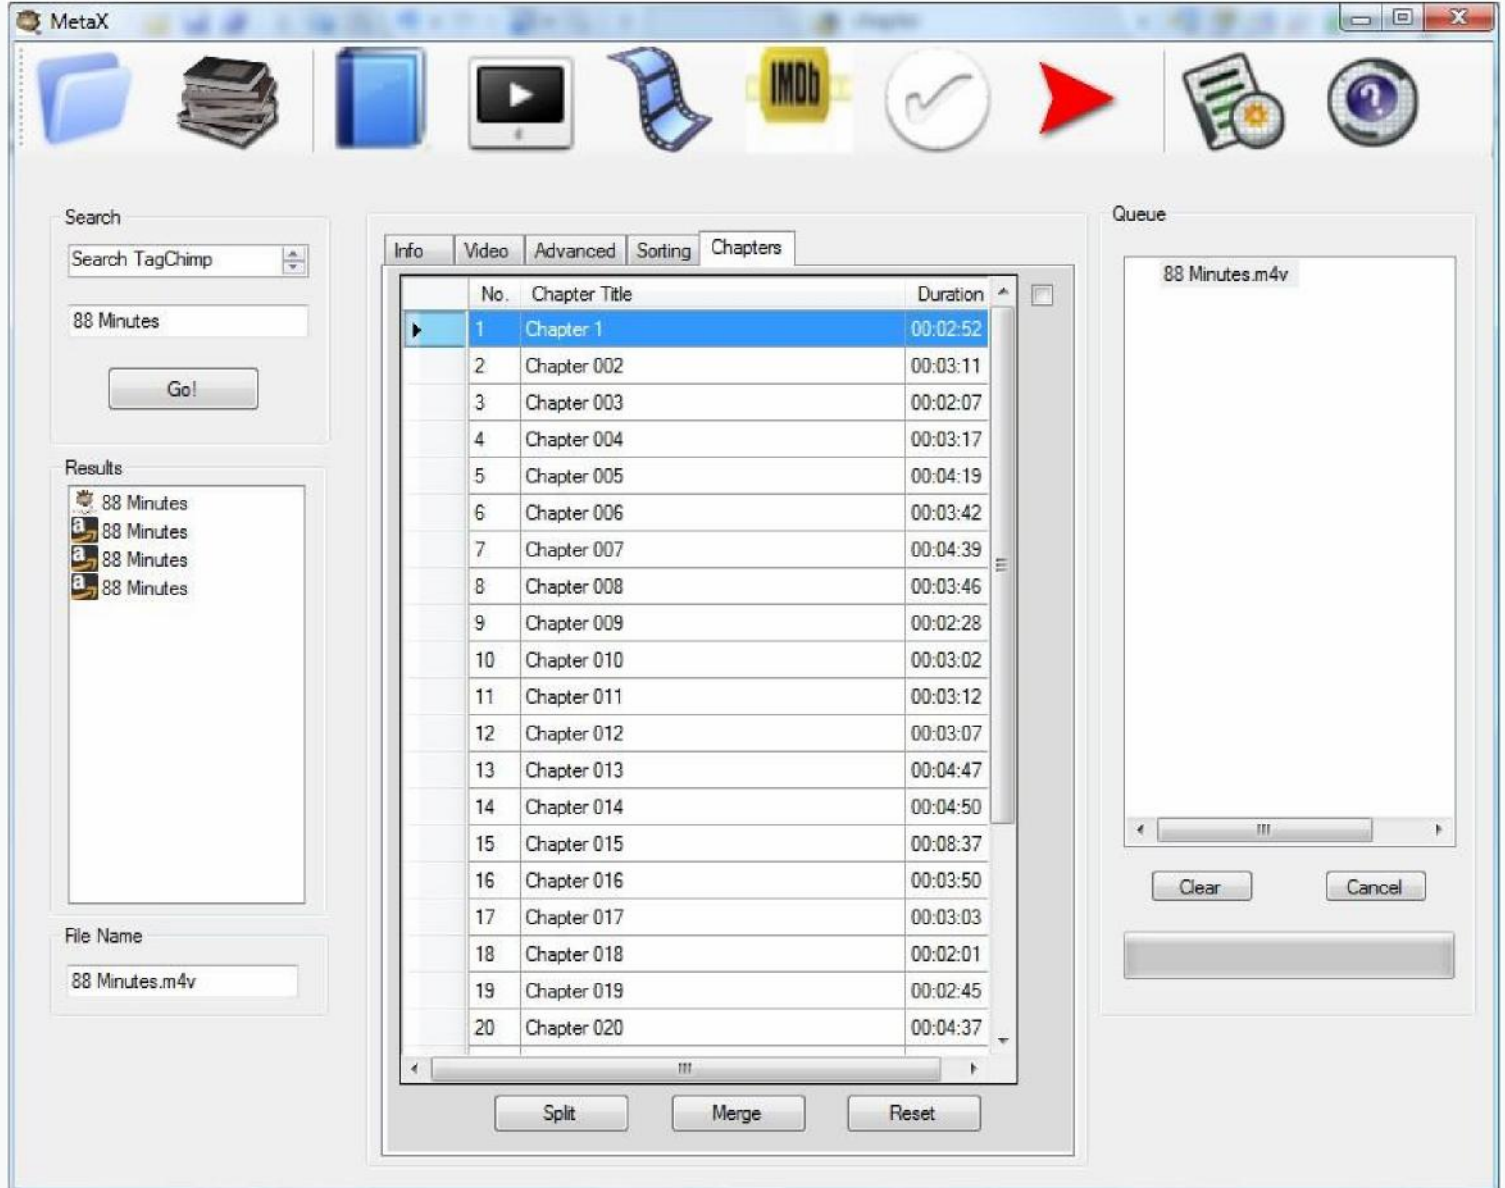

MetaX will retrieve movie posters for use as cover art. Open the poster drawer by clicking the "Movie Posters" button in the toolbar. Images will automatically load and be displayed. Select the poster that you want by clicking on it. The image will now be set in the cover art section of the main window. You can also use the open button or drag a file to the cover image. You can also use the mouse to select a portion of the image to use for the cover art.

The screenshot shows the IMDb website interface. At the top, there's a navigation bar with categories like 'NOW PLAYING', 'MOVIE/TV NEWS', 'MY MOVIES', 'DVD & BLU-RAY™', 'IMDb TV', 'MESSAGE BOARDS', and 'SHOWTIMES & TICKETS'. A search bar is located below the navigation. The main content area is for the movie '88 Minutes (2007)'. It features a 'Watch It' button, a 'Buy it at Amazon' button, and a 'More at IMDb Pro' button. The movie's user rating is 6.0/10 based on 18,862 votes. The director is Jon Avnet, and the writer is Gary Scott Thompson. The release date is 18 April 2008 (USA). The genre is Crime, Drama, and Thriller. The plot describes a forensic psychiatrist and college professor Jack Gramm who is in evidence since... The cast includes Al Pacino as Dr. Jack Gramm and Alicia Witt as Kim Cummings.

The IMDb browser allows you to see data in the IMDb for your movie. Click the "IMDb Browser" button in the toolbar. When the browser launches, it will automatically search IMDb based on your search term in the MetaX main window.

Chapter Editing

MetaX allows you to edit the chapters in your video file.

1. Clicking Merge at the bottom of the chapter list will remove the selected chapter and combine its time with the chapter below it.
2. Clicking Split will split the current chapter into two parts. You can set the duration for the two new chapters by adjusting the slider on the popup window.
3. The final button at the bottom of the chapter list will reset your chapters to their original state. This comes in handy if you make a mistake!

4. You can also drag text information onto the chapter tab to set the chapters. The text should have one line per chapter, each line should start with the chapter number followed by a period followed by the chapter title, optionally followed by the duration in square brackets. The Barnes and Noble website is a good source of this information, so there is a B&N button on the chapters tab that will take you to the B&N website with a search for you show.
